

OFFSET PULL BARS UPDATED

A NEW WAY TO MOUNT

Engineered for Strength. Designed for Flexibility.

Introducing our new Offset Pull Bar Bracket, designed specifically for fiberglass entry doors with doorlites. This breakthrough bracket aligns perfectly with the internal LVL rail—the structural locking spine of the door—providing a clean, secure, and reliable mount without compromising panel strength or design.

WHY IT MATTERS

LVL-Mounted Strength

Bracket screws directly into the main internal LVL (Laminated Veneer Lumber), ensuring pull bars are mounted into the most secure part of the door.

Doorlite-Compatible

For the first time, offset pull bar configurations are now fully compatible with fiberglass panels that include glass—opening up premium design combinations that weren't previously possible.

Expanded Design Options

Offset mounting allows for larger glass areas, unique asymmetrical layouts, and oversized hardware—all without sacrificing stability or performance.

DESIGN WITHOUT LIMITS

Pair this bracket with our full range of pull bars—up to 84"—to create sleek, modern entrances with confident style.
